Update the Editing Page “CV Build” with the following instructions:

---

1. Load Full CV Data Into Editable Sections

- Import all previously generated CV data:
  - Personal info
  - Summary
  - Job Domain
  - Experience
  - Skills
  - Languages
  - Certificates & Training
  - Education
- Pre-fill every section automatically.
- Use **one state object** for all data to reduce re-renders and reduce API cost.

---

2. Section-Based Editing With Confirmation

- Convert each CV section into an **accordion module**:
  - Personal Information
  - Professional Summary
  - Experience
  - Skills & Competencies
  - Certificates & Training
  - Languages
  - Education
- Each section must have a:
  - **“Confirm & Continue”** button
  - Next section remains disabled until previous one is confirmed

---

3. Experience Section (Fix AI Generator + Limits + Standard 5 Responsibilities)

Fix AI Generator

- Ensure AI generation for responsibilities works fully and uses user profile context.

Field Rules

- Change "Description" → **"Key Responsibilities"**
- Each job entry:
  - Minimum: **3 responsibilities**
  - Maximum: **15 responsibilities**

AI Standard Output

When user clicks *AI Generate Key Responsibilities*:

- Generate **exactly 5 responsibilities** as the default.
- AI must use:
  - Job title
  - Industry
  - Years of experience
  - Career level
  - Major/field
  - **Job domain**
- Responsibilities must be:
  - ATS-friendly
  - Action-verb based
  - Measurable and relevant

User Editing Control

- After generating the 5 responsibilities:
  - User can add more (up to 15)
  - User can delete (not below 3)
- Add a counter:
  - Example: **"You have X / 15 responsibilities"**

AI Enhance Buttons

- Every responsibility line has an **AI Enhance** icon:
  - If text exists → AI improves
  - If empty → AI generates based on context

---

4. AI Icons in Every Field

- Add an **AI icon** inside all editable text fields.
- Rules:
  - If filled → Enhance

    - If empty → Generate
- Single-field calls only → reduces API cost.

---

5. Skills & Competencies AI Generator

AI should:

- Generate grouped skills:
    - Technical
    - Professional
    - Soft Skills
    - Tools
- Output 8–15 skills only.
- Tailor based on:
    - Job domain
    - Level
    - Experience years
    - Industry

---

6. Certificates & Training Section

Fields:

- Certificate Name
- Provider
- Year
- Add AI enhancement option.

---

7. Languages Section

Fields:

- Language
- Proficiency Level (4 global levels):
    - Basic
    - Intermediate
    - Advanced
    - Proficient / Fluent
- Include AI suggestion button.

---

8. Live Preview — ATS Format

- panel shows **real-time** CV preview.
- Matches ATS formatting.
- Updates on:
  - Typing
  - AI generation
  - Section confirmation

---

9. Multi-Language (Arabic/English)

- Support both RTL (Arabic) and LTR (English).
- Form fields + preview must be bilingual.

---

10. Mobile + Desktop UX

- Desktop:
  - Left = editing
  - Right = preview
- Mobile:
  - Editing on top
  - Preview collapsible below

---

11. Cost Optimization

- Avoid long AI prompts.
- Use **single-field AI calls**.
- Cache previous AI outputs.
- Store user profile context (experience, level, job domain) to reduce tokens.

---

12. Navigation

- After all sections are confirmed → enable **Next Step: Template Selection**.
- Save final CV data before moving forward.

🔥 13. Subscription Model & Feature Access (Add These Rules Across the CV Builder)

Integrate the following access rules:

A. Free Plan (Limited Access)

Free users should have restricted access to encourage upgrading.

Free users can:

- Access CV builder basic sections
- Manually edit all fields
- View limited AI generation

Free user limitations:

- AI usage limited:
  - Max **2 AI generations** per section
  - Max **10 AI enhance clicks** in total
- Experience section:
  - AI generates only **3 responsibilities** (not 5)
- Skills generator:
  - Only basic skills list (max 5 skills)
- Certificates & Languages:
  - No AI enhancement
- CV download:
  - Only **basic PDF template**
- Templates:
  - Only 1 free template
- Watermark:
  - Add "CVPro Free Version" watermark on preview and download

Motivation pop-up for upgrade:
When user reaches limits:

- Show a modal:
  "Unlock full AI power and premium CV templates with CVPro Monthly or Monthly Plus"

B. Monthly Subscription (Full Access)

Subscribers get complete access to all CV creation tools.

Monthly plan includes:

- Unlimited AI generation
- Full AI enhancement in all fields
- Full **5-responsibility** generation per job
- All advanced skills generation
- All templates unlocked
- High-quality PDF export (no watermark)
- Priority processing speed

C. Monthly Plus Subscription (Full + Extra Services)

Includes everything in Monthly plus **advanced AI & premium features**.

Monthly Plus includes:

- All Monthly features
- Early access to new templates
- Smart AI rewriting modes:
  - ATS Boost mode
  - Professional Tone mode
  - Executive Rewrite mode
- Multi-format export:
  - PDF, DOCX, LinkedIn-Ready text
- AI-generated "Career Achievements" section
- Priority customer support

Subscription Logic Implementation Notes

- Add subscription check before every AI action.
- If user exceeds limit → show upgrade modal.
- Store usage counters in:
  - Local state
  - Session DB
- Build a small function:
  `checkFeatureAccess(plan, feature)`
- Keep all subscription checks consistent across the app.
